

STONE TYPE

Granite

FINISH

Polished

STOCKED SIZES

3/4" (2cm slab)

1-1/4" (3cm slab)

ORIGIN

Espirito Santo, Brazil

GEOLOGICAL ERA

Proterozoic
(544-2500 million years ago)

RECOMMENDED USES

Commercial
Residential
Interior Floor
Countertops
Interior Wall
Fireplaces
Showers

Juparana St. Cecilia is quarried from a bedrock quarry in Espirito Santo, Brazil. It is composed mainly of rather deep yellow, coarse-grain crystals that run from elongated to nearly void. It is also possible to see yellow-brown crystals along with black biotite crystals in the stone. During the polishing process, an epoxy resin is applied to the surface of the stone to fill in any natural pits, cracks or fissures that may exist. This does not affect the durability, maintenance or beauty of the stone. It is possible for some of the more minute pits that are too small to effectively hold the resin, to reopen during other finishing stages. However, this will not detract from the overall quality or appearance of the stone. There will be noticeable variations in color and movement between pieces. Therefore, it is important and recommended that a range of this product be viewed before finalizing a purchase. As a natural stone product, it is recommended that it be sealed to extend its longevity.

This granite is also known as Amber Yellow, Giallo Santa Cecilia, Gold of Troy, Santa Cecelia, Santa Rita, or SF Real.
