Limestone

ORIGIN

Eflani, Karabük, Turkey

FINISH

Honed

RECOMMENDED USES

Commercial & Residential

Interior & Exterior

Floor & Wall

Countertops

Fireplaces

Tub Surrounds

Vanities

SIZES

3/4" (2cm slab)

1-1/4" (3cm slab)

12"×12"×3/8"

18"×18"×1/2"

Seagrass is quarried from a bedrock quarry in Eflani, Karabük, Turkey.

This is a sedimentary stone that is formed on shallow sea beds from monsoonal rains washing minerals, plants and animals into the sea. It is composed mainly of calcite calcium carbonate. Structurally, Seagrass is a very hard limestone. Some common characteristics that are visible in this limestone are quartz veins, grey portions and many fossilized shells in each piece. There will be noticeable variations in color and movement between pieces. Therefore, it is important and recommended that a range of this product be viewed before finalizing a purchase. Arizona Tile also offers Seagrass as a product in our tumbled program, which will include a multitude of mosaics and tile sizes that will provide a more unique style to any design. As a natural stone product it is recommended that it be sealed to extend its longevity.

NSF indicates this product conforms to the requirements of NSF/ANSI Standard 51, thereby meeting the health and sanitation requirements for materials used in areas of food preparation.
