Marble

ORIGIN

Baluchistan, Pakistan

FINISH

Polished

GEOLOGICAL ERAMesozoic
(65-248 million years ago)**SIZES**3/4" (2cm slab)
12"×12"×3/8"**RECOMMENDED USES**Commercial & Residential
Interior & Exterior
Floor & Wall
Fireplaces
Tub Surrounds
Vanities

Michelangelo is quarried from a bedrock quarry in Baluchistan, Pakistan. This particular marble is processed using the most modern wire saws and the latest Italian equipment for optimum results. Rich gold movement, intertwined with lightning bolt white quartz veins against a charcoal black surface, gives this marble its own unique design. Due to these qualities, this marble will vary between shipments. It is also a softer stone, and may be susceptible to scratching or abrasion. There will be noticeable variations in color and movement between pieces. Therefore, it is important and recommended that a range of this product be viewed before finalizing a purchase. It is a common characteristic for this stone to have voids in the raw material. Before it reaches the polishing stages, these voids are filled with a polyester resin. Depending on how deep the void is, the resin may shrink as it dries, leaving the surface of the filled area slightly lower than the rest. This does not affect the durability, maintenance or beauty of the stone. As a natural stone product it is recommended that it be sealed to extend its longevity.

NSF indicates this product conforms to the requirements of NSF/ANSI Standard 51, thereby meeting the health and sanitation requirements for materials used in areas of food preparation.
