

**STONE TYPE**

Marble

ORIGIN

Rajasthan, India

FINISH

Polished

GEOLOGICAL ERAMesozoic
(65-248 million years ago)**SIZES**3/4" (2cm slab)
12"×12"×3/8"**RECOMMENDED USES**Commercial & Residential
Interior & Exterior
Floor & Wall
Countertops
Fireplaces
Tub Surrounds
Vanities

Rain Forest Green is quarried in a bedrock quarry near the village of Vidhasar in the district of Bikaner, Rajasthan, India. This particular marble is very strong compared to others in the industry and usually requires granite machinery to cut and polish the stone. However, it is still considered a softer stone, and may be susceptible to scratching or abrasion. Characteristics in veining and movement will tend to vary between shipments, depending on the portion of the quarry from which the stone was extracted. There will be noticeable variations in color and movement between pieces. Therefore, it is important and recommended that a range of this product be viewed before finalizing a purchase. Due to the qualities of the stone, the slabs are book-matched; meaning slab one and slab two will be cut and polished to create a mirror image of each other. These are then kept in sequence, which allows for a consistent flow in pattern. It is a common characteristic for this stone to have voids in the raw material. Before it reaches the polishing stages, these voids are filled with a polyester resin. Depending on how deep the void is, the resin may shrink as it dries, leaving the surface of the filled area slightly lower than the rest. This does not affect the durability, maintenance or beauty of the stone. As a natural stone product it is recommended that it be sealed to extend its longevity.

NSF indicates this product conforms to the requirements of NSF/ANSI Standard 51, thereby meeting the health and sanitation requirements for materials used in areas of food preparation.
