

**PRODUCT TYPE**

Quartzite

ORIGIN

Brazil

STOCKED FINISH

Satin

RECOMMENDED USES

- Commercial
- Residential
- Interior Floor
- Countertops
- Interior Wall
- Fireplaces
- Showers
- Shower Floors

STOCKED SIZES

3/4" (2cm slab)

1-1/4" (3cm slab)

Beverly Blue Satin is a cool grey quartzite with undertones of blue and a satin finish. This celestial backdrop is accented by striking gold and burgundy veining, scattered throughout. Areas of creamy white add to its character, making this a truly exquisite stone. As an alternative to marble, its hard, resilient surface can be used for kitchen countertops without having the scratching and etching issues experienced with marble. During the brushing process, an epoxy resin is applied to the surface of the stone to fill in any natural pits, cracks or fissures that may exist. This does not affect the durability, maintenance or beauty of the stone. It is possible for some of the more minute pits that are too small to effectively hold the resin, to reopen during other finishing stages. However, this will not detract from the overall quality or appearance of the stone. Due to the qualities of the stone, the slabs are book-matched, meaning slab one and slab two will be cut and brushed to create a mirror image of each other. These are then kept in sequence, which allows for a consistent flow in pattern. Finally, a mesh backing is adhered to the back of the stone to ensure safety while handling and fabricating the slab. As a natural stone product, it is recommended that this be sealed to extend its longevity. Some Quartzite colors have more of an open structure therefore some are more absorbent than others. The sealer that is applied needs to be one that is designed to penetrate properly to ensure that the stone is sealed. Arizona Tile suggests using 3 coats of Miracle Sealants 511 Porous Plus or Dry Treat Premium Impregnating Sealer every 6 months. It's also recommended to seal all cut edges before installation whenever possible. This will help prevent water and oils from penetrating into the stone around sinks, faucet holes, ovens and any seams.
