

ARIZONA TILE

DAKAR

**STONE TYPE**

Quartzite

ORIGIN

Brazil

FINISH

Polished

RECOMMENDED USES

Commercial

Residential

Interior Floor

Countertops

Interior Wall

Fireplaces

Showers

SIZES

3/4" (2cm slab)

Dakar Quartzite is quarried from a bedrock in Brazil. It has a light silver background tone with soft grey veins sweeping across the slab. There may also be light areas of cream or beige running along the grey veins. The veining in this quartzite causes the slab to resemble the look of a marble rather than a quartzite. Because quartzite is harder than granite, Dakar is perfect for kitchen countertops. During the polishing process, an epoxy resin is applied to the surface of the stone to fill in any natural pits, cracks or fissures that may exist. This does not affect the durability, maintenance or beauty of the stone. It is possible for some of the more minute pits that are too small to effectively hold the resin, to reopen during other finishing stages. However, this will not detract from the overall quality or appearance of the stone. Due to the qualities of the stone, the slabs are book-matched; meaning slab one and slab two will be cut and polished to create a mirror image of each other. These are then kept in sequence, which allows for a consistent flow in pattern. Finally, a mesh backing is adhered to the back of the stone to ensure safety while handling and fabricating the slab or tile. As a natural stone product, it is recommended that this be sealed to extend its longevity.
