

GOLDEN RIDGE

STONE TYPE

Granite

FINISH

Polished

ORIGIN

Espirito Santo, Brazil

SIZES

12"x12"x3/8"

3/4" (2cm slab)

1-1/4" (3cm slab)

GEOLOGICAL ERA

Cambrian

(2500 million years ago)

RECOMMENDED USES

Commercial & Residential

Interior & Exterior

Floor & Wall

Backsplashes

Countertops

Fireplaces

Tub Surrounds & Showers

Vanities

Golden Ridge is quarried from a bedrock quarry in the northern regions of Espirito Santo, Brazil and is considered a pegmatite granite. Pegmatite implies that the granite is composed of quartz, feldspar and mica in a coarse-grained igneous rock. A characteristic that will be apparent in some slabs is corundum, which is a form of aluminum oxide and, in its transparent ruby red state, is classified as a gem. Due to the qualities of the stone, the slabs are book-matched; meaning slab one and slab two will be cut and polished to create a mirror image of each other. These are then kept in sequence, which allows for a consistent flow in pattern. During the polishing process, an epoxy resin is applied to the surface of the stone to fill in any natural pits, cracks or fissures that may exist. This does not affect the durability, maintenance or beauty of the stone. It is possible for some of the more minute pits that are too small to effectively hold the resin, to reopen during other finishing stages. However, this will not detract from the overall quality or appearance of the stone. Finally, for some slabs, a mesh backing is adhered to the stone. As a natural stone product it is recommended that it be sealed to extend its longevity.

NSF indicates this product conforms to the requirements of NSF/ANSI Standard 51, thereby meeting the health and sanitation requirements for materials used in areas of food preparation.

SIZE	PIECES/BOX	SF/BOX	UNITS/PALLET	SF/PALLET
