\*DCOF Rating is a measurement of a tile's frictional resistance. It is the specifier's responsibility to ensure the chosen tile is appropriate for each interior and exterior application.

The Amelia Series is a porcelain that emulates a natural stone. It is available in four colors and three sizes, plus a basketweave and a SBN. For proper bonding, medium mortar should be used when installing tiles with a dimensional length greater than 15", and rectangular shape and plank tile, per industry standards. Proper thinset coverage is also necessary, and in some cases, back buttering of tile may be required. Grout release is recommended for the polished finish, prior to grouting so grout powders do not fill pores in the tile surface, which can attract dirt when walked upon. This series is suitable for residential and commercial applications.

When installing rectangular tiles 15 inches or longer with a staggered joint, it is recommended that the offset should not exceed 33%, unless otherwise specified by the manufacturer.
