DCOF rating is a measurement of a tile's frictional resistance. The above result is for the Standard Finish. The testing for R11 Anti-Slip Finish is static, which is different from the Dynamic Coefficient of Friction (DCOF) test which is a dynamic test. These two tests measure for different and separate results, therefore the DCOF test is not the appropriate test for the R11 Anti-Slip finish. To be certified as R11 Anti-Slip Finish, a tile must pass internationally-recognized testing.

The More Wood Series is a rectified color body porcelain. It is the synthesis of digital technology applied to aesthetic research. Giving the appearance of natural wood, this series provides warmth to any space. Because this material is a porcelain product, minimal maintenance is required. More Wood Series is available in two sizes, 8" × 32" × 10mm and 8" × 48" × 10mm. It is available in four colors. Piece to piece variation in shade or color is inherent in all fired clay products; therefore, it is recommended to mix tiles from several boxes at a time during installation to achieve the best range of color. When mixing sizes within a series, shade, texture and calibration differences should be expected. This series is suitable for residential and commercial applications.

For proper bonding, medium bed mortar should be used when installing tiles with a dimensional length greater than 15", and rectangular shape and plank tile, per industry standards. Proper thinset coverage is also necessary, and in some cases, back buttering of tile may be required.
