Crema Vosscione limestone is quarried from a bedrock quarry in Mexico. This is a sedimentary stone that is formed in shallow seas and is composed mainly of calcite calcium carbonate. One of the unique characteristics of this limestone is the existence of some small shells and fossils that may appear throughout the tile or slabs. This limestone will have veining and movement and will range from shipment to shipment. Crema Vosscione is also stocked in the following Honed tile sizes: 16 × 24 and 18 × 18. Crema Vosscione is on the more dense end of the spectrum for limestones. This material is durable enough to use both interior and exterior and in wet areas. There can be noticeable variances between pieces, so it is important and recommended that a range of this product be viewed before finalizing a purchase. Piece to piece variation in shade or color are inherent in all natural stone products; therefore, when installing natural stone tile, it is recommended to mix tiles from several boxes at a time during installation to achieve the best range of color. As natural stone products, it is recommended that these be sealed to extend their longevity.
