GOLD COAST

PRODUCT TYPE

Quartzite

ORIGIN

Brazil

STOCKED FINISH

Polished

RECOMMENDED USES

Commercial

Residential

STOCKED SIZES

3/4" (2cm slab)

Interior Countertops

Interior Wall

Fireplaces

Gold Coast is a polished quartzite from a bedrock quarry in Brazil. This stunning stone blends cream, caramel, gold and green background with bold brown veins. This earthy palette with eye catching movement will bring a beautifully dramatic design element to any space.

Over millions of years, water has penetrated deep into this stone through small cracks and fissures, causing the iron and other minerals to oxidize. It is this process that produces the rich, vibrant gold tones that are visible in this stone. During the polishing process, an epoxy resin is applied to the surface of the stone to fill in any natural pits, cracks or fissures that may exist. It is possible for some of the more minute pits that are too small to effectively hold the resin, to reopen during other finishing stages. Due to the qualities of the stone, the slabs are book-matched; meaning slab one and slab two will be cut and polished to create a mirror image of each other. These are then kept in sequence, which allows for a consistent flow in pattern. Finally, a mesh backing is adhered to the back of the stone to ensure safety while handling and fabricating the slab or tile.

As a natural stone product, it is recommended that this be sealed to extend its longevity. This quartzite has a more open structure and therefore needs a sealer that is designed to penetrate properly to ensure that the stone is sealed. Arizona Tile suggests using three coats of Miracle Sealants 511 Porous Plus or Dry Treat Premium Impregnating Sealer for the initial sealing, which needs to be done at the time of installation and applying one coat of sealer every six months moving forward. It's also recommended to seal all cut edges before installation. This will help prevent water and oils from penetrating into the stone around sinks, faucet holes, ovens and any seams.
