

ARIZONA TILE

OCEAN GREEN

PRODUCT TYPE

Quartzite

ORIGIN

Brazil

STOCKED FINISH

Polished

RECOMMENDED USES

Commercial

Residential

STOCKED SIZE

3/4" (2cm slab)

Interior Countertops

Interior Wall

Fireplaces

Limited Availability: Please contact your local Arizona Tile location.

Ocean Green is quarried from a bedrock quarry in Brazil. As the name implies, the green tones look as if they are ocean waves blended with contrasting bands of browns and blacks. This is a metamorphic stone which evolved from a sandstone due to extreme heat and pressure.

During the polishing process, an epoxy resin is applied to the surface of the stone to fill in any natural pits, cracks or fissures that may exist. It is possible for some of the more minute pits that are too small to effectively hold the resin, to reopen during other finishing stages. However, this does not affect the durability, maintenance or beauty of the stone. Due to the qualities of the stone, the slabs are book-matched; meaning slab one and slab two will be cut and polished to create a mirror image of each other. These are then kept in sequence, which allows for a consistent flow in pattern. As a natural stone product, it is recommended that this be sealed to extend its longevity. Finally, a mesh backing is adhered to the back of the stone to ensure safety while handling and fabricating the slab. This quartzite has a more open structure and therefore needs a sealer that is designed to penetrate properly to ensure that the stone is sealed. Arizona Tile suggests using three coats of Miracle Sealants 511 Porous Plus or Dry Treat Premium Impregnating Sealer for the initial sealing, which needs to be done at the time of installation and applying one coat of sealer every six months moving forward. It's also recommended to seal all cut edges before installation. This will help prevent water and oils from penetrating into the stone around sinks, faucet holes, ovens and any seams.
