Manhattan is quarried from a bedrock quarry. During the winter months, this quarry is shut down for a period of time because of the harsh conditions of snow and ice. This is a metamorphic stone which evolved from a limestone due to extreme heat and pressure. It is also a softer stone, and may be susceptible to scratching or abrasion. It's possible for this white marble to have small white spots that look like ston marks. These white spots happen naturally within the marble and are inherent to most white marbles. It's also possible to have tiny pin holes that do not get filled by the polyester resin during processing. Piece to piece variation in shade or color are inherent in all-natural stone products; therefore, when installing natural stone tile, it is recommended to mix tiles from several boxes at a time during installation to achieve the best range of color. As a natural stone product it is recommended that it be sealed to extend its longevity. When installing white marble you must use a white thinset. Using grey thinset will leave trowel lines and could stain the marble.
