Salem Grey is quarried near Afyon, Turkey. It is dense, which makes it suitable for Interior and Exterior applications. This is a sedimentary stone that is formed in shallow seas and is composed mainly of calcite calcium carbonate. It is a common characteristic for this stone to have pits/voids. This does not affect the durability, maintenance or beauty of the stone. One of the unique characteristics of this limestone is the existence of some small shells and fossils that may appear throughout the tile. There can be noticeable variations between pieces, so it is important and recommended that a range of this product be viewed before finalizing a purchase. Also available in 12 × 24 × 3/8 Renaissance (Sandblasted & Brushed) along with 12 × 24 × 1-1/4 Pool Coping. Piece to piece variation in shade or color are inherent in all natural stone products; therefore, when installing natural stone tile, it is recommended to mix tiles from several boxes at a time during installation to achieve the best range of color. As natural stone products, it is recommended that these be sealed to extend their longevity.
